

Project Milestone 1 Instructions

You should continue working on the document used for the proposal. You will continue to update this document until it eventually becomes your final finished project report. For this milestone, we will be evaluating the following components:

- Progress Overview:
 - Have you taken feedback from the proposal into consideration in your revised Milestone 1 document (if applicable)?
 - Have you specified the models, datasets, and metrics you will be using for this project?
- Methodology Development:
 - Have you improved your methodology section?
 - By now, you should have a concrete plan for what your project looks like, and this should be detailed in the methodology section.
 - What is the solution you are proposing to the problem described in the proposal, and how exactly will you implement this? Please specify the datasets, the models, the compute, metrics, benchmarks etc that will be used throughout this project. If you need to collect your own data, please specify how you will do so.
- Implementation Progress:
 - What have you implemented since the proposal?
 - Have you collected all the required data?
 - What models have you used?
 - Have you established naive baselines/benchmarks for evaluation?
 - You should have some naive implementation of your idea up and running, and some numbers to support the implementation.
- Preliminary Results:
 - Please report some preliminary results from your experimentation. These could include:
 - Established baselines
 - Benchmarking
 - User studies
 - Initial results
- Future Work:
 - What are future steps for your project?
 - What will you be implementing for the next milestone?
 - What are your goals for the remainder of the semester?

Submission: Please edit the same document you used for your proposal with new information/sections for this milestone.

[Overleaf template](#) Just go to Menu and select copy project.

List all group members' names on document and only turn in one proposal per group.
